SCIENTIFIC PERSPECTIVES IN FUNDAMENTAL THEOLOGY

Understanding Christian Faith in the Age of Scientific Reason

by Giuseppe Tanzella-Nitti

Offering a compelling understanding of Christian faith in the age of scientific reason, this book is part of the commitment of the Vatican Observatory to the interdisciplinary research on faith and science and to the evangelization of scientific culture. It is addressed to professors of university courses in science and theology, to students interested in these topics, and to everyone who wants to reflect on a Christian theology developed within our contemporary scientific context. The author writes to advance scientific perspectives in fundamental theology, taking into account the relevant questions that the sciences pose to Christian faith.

SERIES:
Claremont Studies in Science & Religion

ABOUT THE AUTHOR: Giuseppe Tanzella-Nitti is Professor of Fundamental Theology at the Pontifical University of the Holy Cross in Rome and Adjunct Scholar at the Vatican Observatory. His specializing is the intersection of religion and science. He has worked in the field of radio astronomy and cosmology at the Institute of Radio Astronomy in Bologna and then as an astronomer at the Astronomical Observatory of Turin. He publishes on the relationship between philosophy and theology, on the natural knowledge of God, on the unity of knowledge, and on the humanistic dimensions of scientific research.
